Visualization Prototype Development to Demonstrate the Breadth and Depth of Electronic Health Record Data

Ahmad Aljadaan, Ross Lordon, Jacob Olsufka

Problem: The UW Institute of Translational Health Sciences (ITHS) Data QUEST team needs improved data visualizations of their electronic health record data (EHR). The goal is to facilitate website users' data exploration.

Motivation: Our tools will help researchers have a better understanding regarding the types of data and characteristics available to them.

Approach: Deliver three unique rapidly produced prototypes to the Data QUEST team for evaluation. Future work: The prototypes will be improved and eventually incorporated into the team's website. Additional prototyping can be done on different forms of EHR data not already obtained from ITHS.
